Ab initio Session 7 Introduction to Ab Initio
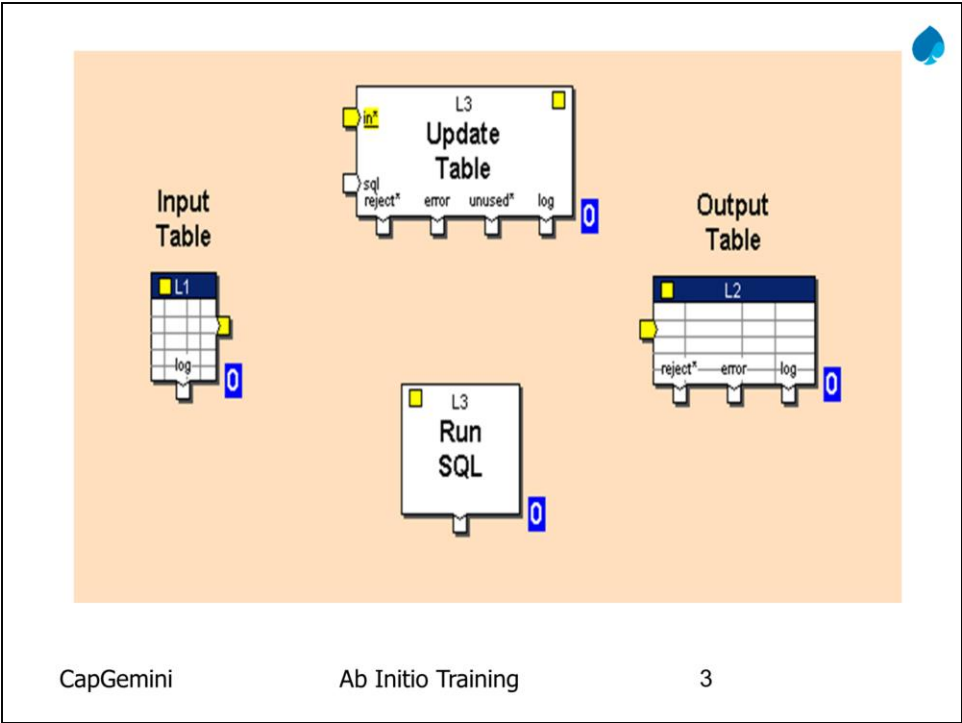

Capgemini

Ab Initio Training 1

DATABASE COMPONENTS

➢ **Input Table**
➢ **Output Table**
➢ **Update Table**
➢ **Run SQL**

CapGemini   Ab Initio Training   2

Input Table

➢ Input Table unloads data records from a database into an Ab Initio graph, allowing you to specify as the source either a database table, or an SQL statement that selects data records from one or more tables.

CapGemini   Ab Initio Training   4

Output Table

➤ Output Table loads data records from a graph into a database, letting you specify the records' destination either directly as a single database table, or through an SQL statement that inserts data records into one or more tables.

CapGemini   Ab Initio Training   5

Update Table

➤ Update Table executes UPDATE, INSERT, and DELETE statements in embedded SQL format (or a stored procedure) to modify a table in a database, and writes status information to the log port.
